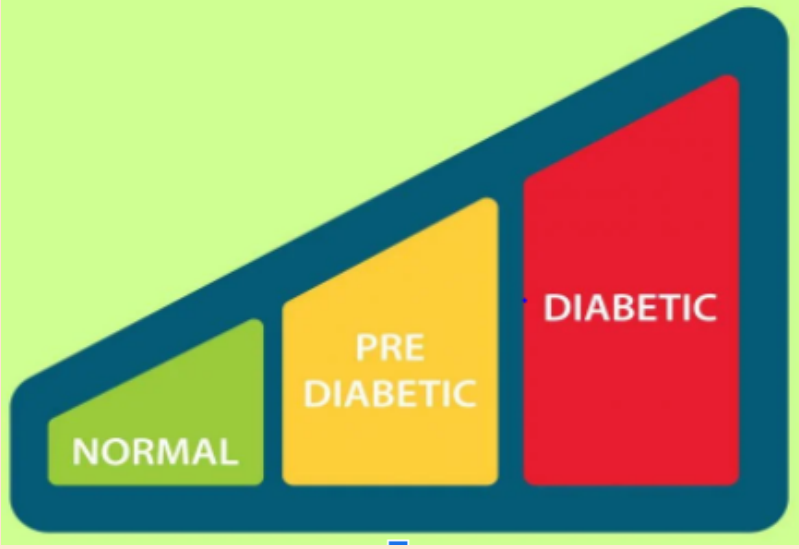
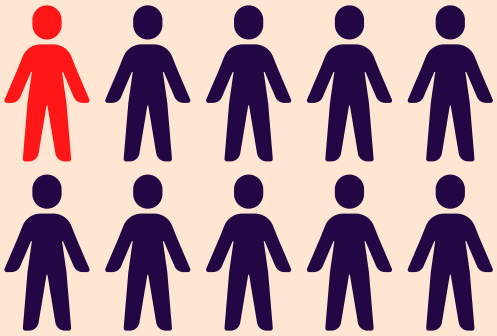
ALL ABOUT

PREDIABETES

WHAT IS PREDIABETES?

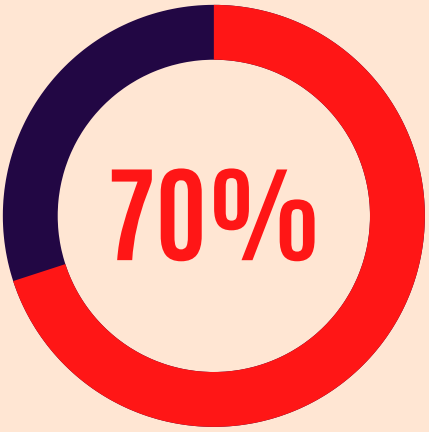
Your blood sugar level is higher than normal but below the diabetes threshold.





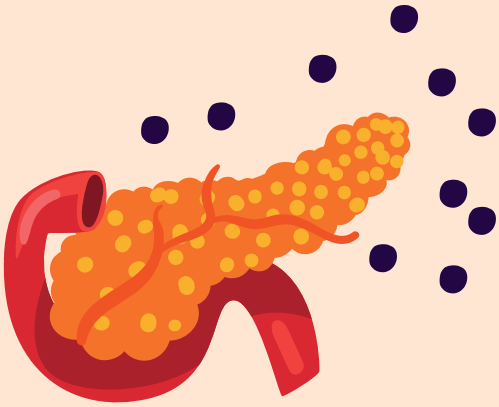
1 in 10 people with prediabetes will progress to type-2 diabetes each year.

70% of people with untreated prediabetes will eventually progress into type-2 diabetes within their lifetime.



WHAT WENT WRONG?

This is your pancreas, it is situated deep into your abdomen.



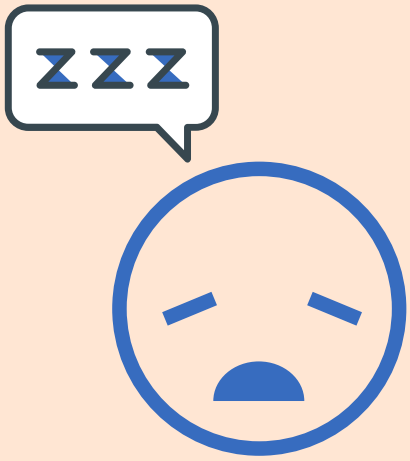
Your pancreas produces a hormone called insulin.

Insulin is like a key that allows blood sugar into your cells to produce energy.

When you have prediabetes, your cells become less sensitive to insulin.

WHAT WENT WRONG?

Your pancreas works harder to produce more insulin to get your cells to respond.



Eventually your pancreas becomes exhausted, while your blood sugar continues to rise.

This is the starting of prediabetes...

...and if untreated, would lead to type-2 diabetes.

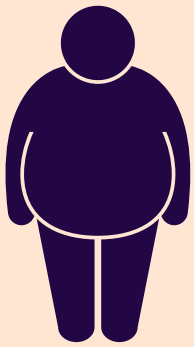
HOW IS IT TESTED?

Prediabetes usually has no symptoms, it can only be detected through blood tests.

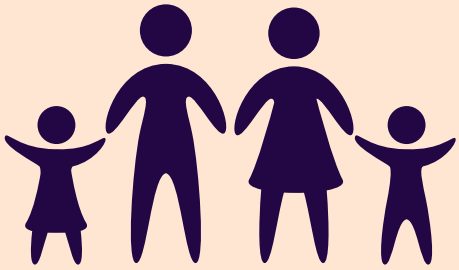
FASTING BLOOD GLUCOSE	GLUCOSE CHALLENGE TEST	HBA1C
Measures blood sugar levels after an 8-hour fast	Measures how quickly your body metabolizes the sugar in your blood	Measures average blood sugar level for the past 3 months
6.1 - 6.9 mmol/L	7.8 - 11.0 mmol/L	5.7 - 6.2%

WHO IS AT RISK?

> 45 years old



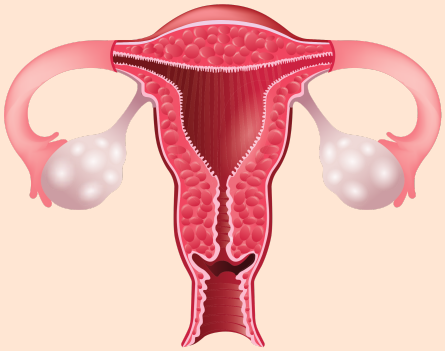
Overweight/ Obese



Parents/ siblings with diabetes

Sedentary lifestyle

Asian ethnicity



History of polycystic ovarian syndrome

Heart diseases, stroke, high cholesterol & high blood pressure

History of gestational diabetes

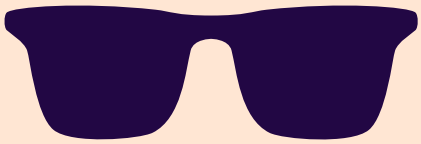
Taking medicines that can raise blood glucose

PREDIABETES CANNOT BE TAKEN LIGHTLY...

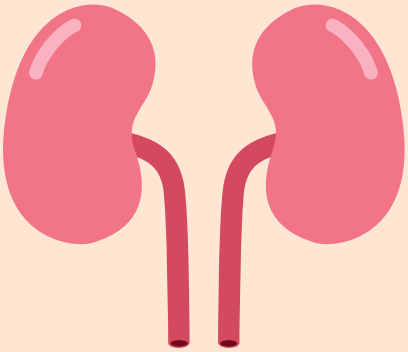
It can lead to:

Type-2 diabetes

Heart diseases



Blindness



Kidney diseases

Stroke

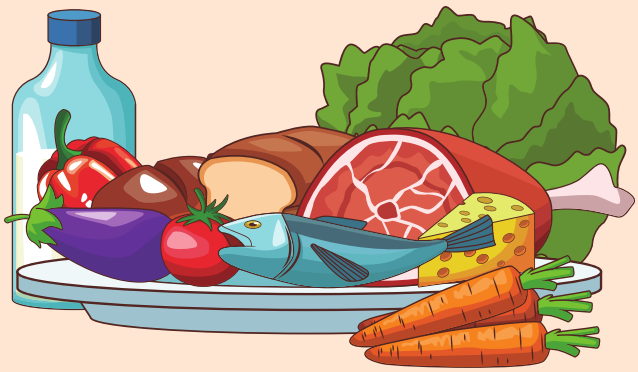
Numbness of the limbs

BUT IT'S NOT TOO LATE, YOU CAN BE TREATED!

HOW IS PREDIABETES TREATED?

Change your lifestyle habits and control your weight, by:

Increasing physical activities



Eating healthy

Sleeping well

Avoiding alcohol and smoke

DID YOU KNOW...

Changing lifestyle habits requires a lot of perseverance and determination. Many people gave up halfway through the process.

But don't worry, we are here walking with you through this journey!

Let's begin our journey for a healthier body!
